

PowerTrip™ Work the Code.

PowerTrip is the first current limiting device created specifically to work with state and national energy codes* that restrict the design flexibility of line voltage track lighting. Featuring miniature current limiting technology, PowerTrip matches the supplied power to the actual consumption of the track fixtures used. PowerTrip allows track to remain a viable lighting solution in applications requiring low wattage densities – especially those utilizing high efficiency fluorescent and metal halide light sources. Compatible with all Lightolier Lytespan track lighting systems. For additional information on PowerTrip or Lightolier track products, contact us at: (508) 646-3107.

* California Energy Commission Title 24, ASHRAE/IESNA 90.1-2004, IECC 2003.
